

KOLAKANI SAI VARDHAN

Java Software Developer

Hyderabad, India | +91-6305123250 | saivardhankolakani7@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFILE

B.Tech (Internet of Things) graduate, CGPA 9.2/10, with hands-on Java development experience and a strong foundation in Object-Oriented Programming, Data Structures & Algorithms, and Database Management Systems (DBMS). Built three end-to-end projects spanning Java-based application logic, machine learning, and IoT systems, including a peer-reviewed paper presented at an international engineering conference (ICRTETM 2026). Comfortable working across the stack — Java, SQL, REST-style APIs, and React front ends — with practical exposure to Spring Boot and Maven through Java Full-Stack training. Seeking an entry-level Java Developer role to write clean, maintainable code and contribute to production systems from day one.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Core Java: OOP, Collections Framework, Exception Handling, Multithreading, JDBC, Data Structures & Algorithms

Frameworks & Web: Spring Boot, REST APIs, Maven, React.js, HTML, CSS

Databases: MySQL, PostgreSQL, MongoDB

Tools & Platforms: Git, GitHub, IntelliJ IDEA, Eclipse, VS Code, Power BI

Core CS: Operating Systems, Computer Networks, System Design fundamentals

PROJECTS

Intelligent Motion-Compensated Stretcher — Real-Time Pitch-Roll Control

Java | Embedded Systems | IMU Sensors | Microcontrollers | Real-Time Control | IoT

- Designed and implemented a closed-loop pitch-roll stabilization algorithm using IMU sensor feedback and actuator control, reducing stretcher tilt deviation on uneven terrain
- Optimized the real-time control loop and sensor-fusion logic, cutting response latency and improving patient stability during transport
- Co-authored and presented original research at the 6th International Conference on Recent Trends in Engineering, Technology and Management (ICRTETM 2026)

Predictive Analysis for Patient Readmission

Python | Java (data layer) | Machine Learning | Random Forest | SQL Server | Power BI | Scikit-learn

- Built and trained a Random Forest classifier on 1,000 patient records, predicting 30-day readmission risk with 72% accuracy
- Engineered and selected features through a custom preprocessing pipeline, improving model performance over the baseline configuration
- Delivered interactive Power BI dashboards that surfaced high-risk patients for clinical follow-up, turning raw predictions into actionable insights

Safeguarding E-Commerce: Fake Review Detection System

Python | NLP | TF-IDF | Logistic Regression | Random Forest | Scikit-learn

- Built an NLP and machine learning pipeline using TF-IDF vectorization and Logistic Regression/Random Forest models to classify reviews as genuine or fake
- Implemented text preprocessing and feature extraction to convert unstructured review text into model-ready data, improving classification accuracy
- Developed a web-based interface for real-time review authenticity checks, enhancing consumer trust and platform reliability

EDUCATION

B.Tech in Internet of Things (IoT), Malla Reddy University, Hyderabad

2022 – 2026

CGPA: 9.2 / 10

Intermediate, Alphores Junior College, Karimnagar

2020 – 2022

CGPA: 9.8 / 10

CERTIFICATIONS

- Java Programming — GeeksforGeeks
- Java Full Stack Development — Udemy
- Cloud Computing Architecture — Great Learning
- SQL — Udemy
- Generative AI — Udacity
